

## BOOKS WITH REAL HEALTH WISDOM

*For the health that man was meant to have*

### AMAZING NEW HEALTH SYSTEM

The Inner Clean Way outlines a programme for the daily cleansing of the stomach and intestinal tract as the first requisite for good health. R4,00 — \$5,00 — £2,75.

### FORMULA FOR LONG LIFE

Shows why we should enlist the dynamic self-healing power of the body, and refrain from suppressing symptoms with drugs. Contains chapters on fasting, raw diet, and natural healing.

Price: R4,00 — £2,75 — \$5,00.

### HATHA YOGA — THE VIBRANT SCIENCE OF LIFE

This book explains why this science which is over three thousand years old is the most comprehensive and profound way to achieve a higher health potential.

Price R5,00 — \$6,00 — £3,00.

The author Morris Krok, using the methods outlined in his books is youthful and supple enough at the age of fifty to run the standard marathon a few minutes over the three hour mark, run 125 miles a week in training, sit in the lotus pose for an hour, or stand on his head for forty five minutes.

Order from: ESSENCE OF HEALTH,  
Box 180, Westville, 3630.  
South Africa.

## FRUITARIAN DIET AND PHYSICAL REJUVENATION

DR. O.L.M. ABRAMOWSKI

#1.75

## Fruitarian Diet and . . Physical Rejuvenation.

---

**I** ADVOCATE the simple and single natural food of original man even for modern man, in spite of all the long centuries of mixed and cooked dietary of mankind. I feel strongly—very strongly—on this subject. And why? Firstly: because the natural uncooked food has saved my life, has rejuvenated my body and made out of an over-fed, old man, courting apoplexy and rushing blindly into a premature grave, a comparatively young, vigorous and healthy person, fit and willing to live another half century. And secondly: because it has, through my mediumship, saved many a valuable life threatened by disease, which would have succumbed under the unnatural modern diet and orthodox treatment.

Up to my fiftieth year I lived on the common mixed diet. I had meat, bread, vegetables, a little fruit, etc., all cooked; I drank tea and coffee, beer and whisky, and smoked cigars. I grew stout and heavy, and, although I did my work as a physician and surgeon with the usual amount of success, I began to feel that I would not be able to stand the strain of an active life much longer, as the resistive powers of my tissues were getting weaker, and more infirmities presented themselves from year to year.

Palpitations of the heart, sleeplessness, headaches, rheumatic and digestive troubles and other disorders made their appearance and became more and more

confirmed. Still I managed to square all these warnings, until the unduly high blood pressure, caused through constant stimulation, brought on epistaxis and my nose bled once for eight hours and in the following year for fourteen hours. An examination of my arteries proved them to be in a progressed state of hardness and brittleness—arterio-sclerosis, as it is called. We are as old as our arteries. As soon as I found out the dangerous condition of my vascular system, I knew that my days were numbered, and that mother earth would soon cover this ruined body of mine unless a miracle happened.

The miracle has happened! My arteries have carried me safely, so far, through ten more active and strenuous years, and they are in a much better condition to-day than they were twenty years ago. All the symptoms enumerated above have disappeared, the power and endurance of my body and mind have increased to a wonderful extent, and I feel more vigorous, more active and more certain of my life than I did when a young man. More still, I know now that I have my life and my health in my keeping, and that if I live right I shall prolong my life to its natural limit.

O—O—O—O

#### **Diet in Relation to Health.**

The uncertainty of life and health is usually considered a proved fact. And we might well fall in with this public error when we see young and old, weak and strong, healthy and sickly people die, with apparently no regard to their station or condition. Still, in the face of that experience, I declare that, accidents excepted, there is nothing more certain and more reliable than a life properly lived. We do not die, we kill ourselves; and mostly with our teeth.

There is nothing better proved than the equal health and the equal longevity of free, wild animals. The birds and insects in the air, the fishes in the water, the animals in the forests and on the prairies, they all have their certain term of life, and they all live up to it, if accidents and injuries are excluded. Furthermore, they are healthy and perfect specimens of their kind.

Where are the perfect specimens of mankind? And how many of modern men manage to live even approximately to our natural term, viz., from 100 to 120 years? What about the state of health of man and his sub-human helpers—the domestic animals? Is their flesh really weak and heir to innumerable diseases, while that of the wild animals is strong and immune? No; the difference is not in the original flesh, but in the method of repairing and replacing their flesh; it is in the food-material, for we are what we eat.

~~No free-living animal ever tampers with its food.~~ One single food is enough for it from year to year and through all the ranging seasons. If it cannot get this food on the spot, it will either go where it can get it, led to it by an unerring instinct, like the migratory birds, or it will die, like the silkworm, which will not eat anything else if it cannot get the leaf of the white mulberry. Free-living animals will not 'improve' their food, nor will they eat any unnatural or artificial mixture; they keep their flesh pure and healthy; they do not know disease; they know only life—full, buoyant life in constant health—and death.

Man, especially civilised man, is not satisfied with the single food offered to him by the hands of Nature. In fact, in many instances he has quite forgotten what his natural food is, and looks with

fear and suspicion upon the luscious fruits, the strength-giving nuts, and the ideal body builders, the grains in their natural state. He has for centuries prepared and improved his food. He has cooked and stewed, baked and roasted, changed and mixed the most heterogeneous substances in such a multiplicity of ways, that his whole food has become an unintelligible, and, for his body, **mostly useless** and poisonous mess of devitalised and disorganised food materials, which he is pleased to call "mixed diet." This dead and artificial food is not only unable to keep the body alive and in repair, but is filling it with waste matter, and forms the **pre-eminent cause** of disease and premature death.

In spite of all the boasted modern chemical remedies, changing with **kaleidoscopic rapidity** from day to day; in spite of **vaccination and injections**; in spite of serotherapy and organotherapy; in spite of all the modern artificial, electrical and magnetic appliances the general death rate of Typhoid and of the epidemic diseases is as high to-day as it was centuries ago. The deaths from Bright's Disease, Diabetes, Pneumonia and Cancer are increasing in number every year, and only in the mortality from pulmonary Tuberculosis, when treated by natural means in its first stage, appears a slight reduction.

Sanitation and Hygiene have reduced the number and the extent of epidemics. But if you are once attacked by any disease, your chances of recovery, under the usual modern medical treatment, are to-day hardly better than they were during the **darkest ages of medical quackery**, of human superstition and credulity.

These and similar observations had so much disheartened me that, after a not unsuccessful medical

career of fifteen years, I had decided to give up the **medical profession as soon as the income from my land here would supply my wants.**

o—o—o—o

### **My Personal Experience.**

During the last six years, however, a change has taken place in my relation to my profession. I am no longer willing to give it up. On the contrary, I am to-day filled with an enthusiasm for the noble Art of Healing, even greater than I felt when, as a young doctor, I **was just let loose upon unsuspecting humanity a generation ago.** But my present enthusiasm is not founded on the blind belief in 'authority' and the daily-repeated experimenting with newly-invented remedies. It has its roots in my own experience and studies and in my changed views with regard to the nature of Disease.

Yes; my own body, my whole family, and the families of my friends and patients have proved it and are proving it daily, that our health depends upon our food, and that we have it in our own power to keep healthy or to get sick.

Before I started on the natural food, I suffered from numerous colds every year, and for years I had a severe attack of influenza every Christmas. Wife and children were equally troubled; colds, sore throats, diphtheria, measles, whooping cough, even typhoid, they all appeared in our family in their turn, and at pretty regular intervals.

Since fruit has been our mainstay, and meat has disappeared from our table, since water and fruit juices became our drinks, since tea and coffee were reduced to a minimum, no disease whatever has made its appearance in our home, and we have lost all fear

of disease or infection, while in quite an automatic way I have lost all inclination and taste for beer, whisky and tobacco.

The two children born since our conversion, a girl now five years old, and a boy three years old, have never had a day's sickness in bed, and have developed in a way far superior to my older children, and promise to grow into as perfect specimens of humanity as the imperfect condition of their ancestors will permit.

And the results with my patients? Well, they are simply phenomenal! Out of 166 cases of typhoid (at the Mildura District Hospital), treated with fruit and fruit juices, without any drugs or unnatural alimentation, only two died, the one coming too late (in the third week) under the régime, the other succumbing to a heat-wave, when four, apparently healthy people, died in the streets around in one week with heat-apoplexy. Of nine cases of appendicitis, without operation or drugs, not one died; inflammation of the lungs passed into convalescence in from four to ten days without even a crisis. Acute affections of the bronchial tubes, the bowels, the nerves, rheumatic and other feverish attacks have been deprived of their pains and anxiety, and cured in the shortest time through fruit juices and fruit fasts.

Besides this saving of life, the greatest recommendation for the new treatment is undoubtedly the almost complete absence of complications in any of the diseases, and the all but certain relief from distressing symptoms in a comparatively short time.

The typhoid patients, for instance, were hardly ever delirious, neither did they show any threatening symptoms from the bowels, excepting a few slight and

short hemorrhages; no vomiting, distension or diarrhoea, no complication from the lungs or the heart or any other organ.

The nine cases of Pneumonia all ran a very unexciting course; the crisis was a mere falling off of the temperature with very little sweating (often none at all); no symptom of collapse or delirium.

The surprisingly favourable influence of our treatment upon the course of disease could not fail to impress itself upon our nursing staff. All the experienced nurses occupying the place of Matron were, in consequence of their previous training in other hospitals, at first conscientiously prejudiced against the treatment; but without exception they all were very soon convinced of its exceedingly favourable results and then became its most persistent advocates. The younger nurses, whom I was training myself, never doubted my teaching.

The ultimate result with our nurses since 1903, was that most of them became fruitarians themselves, and, as a matter of fact, got stronger and healthier than they ever were before.

o—o—o—o

**Practical Results in Surgical Cases** In surgical cases the fruit-fast has provided a wonderful factor in purifying the blood and strengthening the healing powers of Nature, so that without any antiseptic wound-poisons, using only cleanliness and sterilised water during operations, our wounds and injuries now heal better and quicker under a common wet compress than they ever did before under carbolic acid, sublimat or iodoform.

If, after a time of feeding, the wounds do not look as well as they should, a short fast with a restricted quantity of fresh fruit very soon puts fresh

life into the healing process, and renders the wounds clean and healthy looking.

The small number of these cases at the Hospital does not warrant any further remarks. I have, however, before me a letter dated June 3, 1908, kindly sent me by Dr. Josiah Oldfield, the wellknown London surgeon and superintendent of the fruitarian "Lady Margaret Hospital" at Bromley, England, which proves the immense benefit of a regime similar to our own in surgical cases and which I shall here quote in full. Dr. Oldfield says:

"I am very much interested in your letter of the 10th of February and especially to know that you are carrying out similar experiments in Australia to those which I am doing here, and that you find the fruitarian dietary is so valuable in your Hospital. I have had a very little experience in typhoid cases myself, but we have a great deal of surgical work here, and my experience is that one gets a smaller amount of shock, and less amount of inflammation, and more rapid healing, and more complete restoration to the original vitality than one gets on a meat diet."

"I should have no objection to your quoting this statement of mine before your Medical Congress, as I make it with the experience of having done over two thousand operations on patients treated on the fruitarian dietary, and I have come to the conclusion that to obtain the best results it is well to put the patient on a fruitarian dietary a month before operation. In abdominal cases and rectal cases and in internal cases the benefit of having a clean aseptic condition of the bowels is of the greatest importance. I have lost only one case after operation during the last ten years."

At "Coronet Hill," my Sun-Sanitorium near Melbourne, cases of Neurasthenia, Paralysis, Bright's Disease, Drug and Alcohol Poisoning, Rheumatism, Arthritis, Diabetes, Skin Diseases, Arterio-Sclerosis, and many other afflictions which gradually became worse under the usual treatment, and were eventually declared incurable by the orthodox profession, have

been not only improved but healed, absolutely cured, when enough time was allowed for Nature's slow but safe healing processes.

o—o—o—o

### General Principles.

This treatment is based on the following observations:—

Disease is practically restricted to Man and his domestic animals. Free animals are nearly always healthy, like the birds in the air and the fish in the water. The difference in living between Man and the free animals will give us the cause of Disease.

Free animals live on natural food and natural drink. Man seldom likes natural food and drink; he prepares his food and drink.

Preparation of food means, practically, the application of heat to it, or, in other words, cooking in all its different branches.

Natural food does not want cooking, but is chemically changed—often killed—by boiling temperature, whilst a great number of unnatural foodstuffs are made eatable and digestible by heat. Cooked food is dead food.

A diet full of **dead material** forces the body to great exertion in order to extract the few living particles, or to revivify those that can essentially yet be used, and thereby weakens the constitution; while, on the other hand, it must fill the body with useless material, often decomposed and poisonous, which we call "waste matter."

**Waste matter**, the product of **cooked food**, is the cause of most bodily encumbrances and impeded bodily functions. Nature may for a time accommodate this waste matter, but then it has to work under difficulties, which are the symptoms of so-called chronic disease.

As soon as the bodily functions cannot go on any longer under the daily-increasing burden of waste matter, the process of life would come to a standstill, and death would follow, if Nature did not start a process of removing the waste matter. This process of "burning off rubbish" in order to enable the body to go on with the work of life is called Disease.

o—o—o—o

### **A Radical Change in Treatment.**

A treatment founded on these views must naturally be very different from that at present taught at the Universities, where disease is considered as an enemy of human life and as brought on by accidental causes such as changes of temperature, miasmatic influences, microbes, etc.

The present-school Treatment tries to cure the different diseases by suppressing the different symptoms, and is therefore always looking for specific remedies which have to vary with each disease. The effects of its therapeutic actions are not only uncertain but often directly mischievous, imposing upon Nature the task to get rid of the poisonous drugs called 'medicines,' in addition to the bodily impurities.

The new treatment, on the contrary, does not interfere with the different symptoms, which are considered as so much smoke produced from the internal fire, but endeavours to assist Nature by keeping away everything that might interfere with the great internal cleansing process, and by removing all hindrances to the free working of the eliminating organs.

The first purpose is gained by stopping, for the time, any fresh food supply; the second, by giving unlimited quantities of fresh water, and by sweating or other hydrotherapeutic measures.

Yes, I advocate Fruit Diet not only because Man is a fruit-eater anatomically and physiologically, but because my experience as a patient and a physician has proved to me the beneficial influence of the natural food on healthy, as well as on sick, people. The first will preserve their health and strength, their corporeal, mental and spiritual powers, to the highest old age, under a fruit diet. To the latter, the sick people, I like to say as a last injunction, "Do not give up hope, whatever be the matter with you. Nature can heal where human wisdom and interference fails; return to Nature; live on Man's natural food; build your body of the normal, life and strength-giving material, and you will find that the time of miracles has not passed yet."

o—o—o—o

### **Food and Vitality.**

Man's body is a commonwealth of innumerable living cells, each one filled with organic electricity (so-called vitality), and forming in their totality a marvellously adjusted power-plant or storehouse of organic power, i.e., of life.

Life is constant motion and constant change, brought about through the outward manifestations of this organic electricity by means of the different tissues and organs forming our body.

A constant stream of organic electricity and organised building material must pass through our body in order to repair the constant loss of energy and of cell-substance accompanying the phenomena of life.

Our food is this life-giving stream. Our food, therefore, must not only contain all the different elements composing the substance of our cells, but must contain them in organised combinations of high potential electricity, so that we may eat both matter and energy.

All the energy on Earth is derived from the sun. Sun-power is being constantly stored up in the plants, which, under its influence, forms out of the simple elements needed in our body, food materials containing the highest latent energy.

Ripe, uncooked fruit is the most attractive and delicious, and nuts are the most compact and nutritious representation of condensed sunlight—the highest accumulation of vital energy.

The energetic tension—the life—in the food materials is destroyed by the temperature of boiling water: a ~~cooked seed cannot germinate~~.

Food thoroughly cooked is food ~~thoroughly killed~~; food partly cooked, as in our kitchens and bakehouses, is food partly dead and partly living.

Nobody can live on dead food, whether mixed in the chemist's shop or in the kitchen, or on food deprived of its vitality through cooking.

Many people die nowadays simply from want of vitality through trying to live on cooked food only.

Modern Man lives really on the moiety of his food not killed by heat; the cooked part is so much dross and waste matter, causing disease and premature death.

The natural food of Man is formed by those articles we can eat, enjoy and assimilate in their natural raw state.

Living organised Man wants living organised food, which he cannot get from ~~dead animals~~ or ~~cooked vegetables~~; and his health is in direct proportion to that part of his food which he eats in its natural state.

Civilised Man's present diet consists largely of natural food disorganised by cooking, or of unnatural food disorganised but rendered eatable and digestible by cooking, and containing matter dangerous or directly poisonous.

The consequences of this wrong diet are a general decline of civilised people in the development of body, their health, strength, duration of life, character and social habits.

The greatest enemy of life, and therefore of organic electricity, is fire, or a temperature able to sterilize albumen. The temperature of boiling water destroys life in plant or animal tissue, and therefore the process of cooking must of necessity deprive our food of its vitalizing qualities; ~~cooking means devitalization of the food material~~.

We know that to the living albumen-molecules are attached in an organised combination most of the so-called food salts. Cooking not only changes the albumen by coagulating it, but it also detaches from the albumen-molecule the food-salt; it tears these out of their organic combination and reduces them to lifeless inorganic matter.

We see then that from the chemical as well as from the biophoric (life-carrying) standpoint, cooking interferes most disastrously with the value of our food. It practically destroys the food in its functions as life-giver and as building material.

~~Cooked food, therefore, is useless to our bodies as far as the building material is concerned.~~

In order to reclaim humanity, our food, as offered by the hand of Nature, will have to be used in its natural living condition, and the valuation of food should be taken, not according to its caloric or chemical standard, but by its biological, or better, its biophoric, i.e., life-giving qualities.

o—o—o—o

#### **Advantages of Fruitarian Diet.**

Raw fruit diet supplies every want of the human economy, and it is not only as nourishing and sustaining as the most expensive mixed diet, but it produces more energy and endur-

ance, and is more easily assimilated, and is absolutely free from any dangerous matter.

Raw fruit counteracts the deleterious influences of the usual mixed diet, as it prevents constipation, helps the excretion of uric acid and other acid poisons by rendering the blood more alkaline, and supplies those important food salts which in a cooked diet are rendered almost valueless.

Raw fruit is not only food but medicine for all people using cooked food, and these should therefore eat as much raw fruit—fresh or sun-dried—as possible, or have at least one meal a day consisting of fruit only.

It is advisable for every mixed eater in order to purify his body, to undergo a fruit cure of four to six weeks' duration every year, at a place where and at a time when, the fruit is at its very best. Such cures would do more good than the usual annual visit to the seaside.

If parents are not able to give up the usual abnormal dietary, they should at least allow the natural instinct of their children for fruit full play, and, if possible, bring them up on the natural diet. These will thereby escape many diseases, and grow up, not only healthy and strong, but gentle and lovable, and free from unnatural propensities and vices.

Humanity cannot hope to escape the attacks of the ever-present microbes by cooking those few contained in the food and water. The only reliable safeguard against infectious diseases is the natural resistance of a body free from poisonous waste matter (which acts as food for disease germs).

Fruit is the only food which neither introduces dangerous material into the body nor produces such while passing through it.

Fruit diet will once more enable mothers to suckle their young by producing an abundance of milk rich in all necessary constituents, but free from any dangerous matter.

Sun-dried fruit is as good as fresh fruit, as its whole vitality is preserved; it should, however, not be cooked, but only soaked for about eighteen hours in sufficient water to make it swell, and should then be eaten raw.

Fruit does not only satisfy hunger but also thirst, and does not create any craving for tobacco or other stimulants.

Fruit is not a luxury, but an absolute necessity in the diet of Man. It is the duty of every thinking man who does not live merely to eat, to live as much as possible on man's *natural* food.

o—o—o—o

### **Man's Natural Food.**

From a scientist's point of view, man is nothing but the highest-developed animal, and, anatomically speaking, he belongs to the fruit-eaters.

The shape and arrangement of his jaws and his teeth, the want of any natural organ for offence or attack, such as tusks or claws, prove that he is not naturally an aggressive animal, or a destroyer of life. The relative length and internal arrangement of his digestive canal, the shape of his skull, his hands and his feet, and his upright habits prove that his nearest surviving relatives amongst the highest animals are the man-like apes—viz., the active chimpanzee, the powerful orang-outang, and the awe-inspiring gorilla. These animals live on fruit and nuts, and develop on this food such a power, that, for instance, an

orang, unaided, has wrenched a young tree out of the hands of six British sailors, and that the gorilla will take up the fight with a lion, and hug this king of the beasts to death in his powerful embrace.

Open the mouth of a meat-eater, like the cat or the dog, and you will find there is not one single tooth like ours, and the whole set is differently arranged from that of Man. Further, we know that carnivorous animals do not sweat (as their sweat glands are atrophied), because a sudden cooling down through heavy perspiration of the body of a meat-eater, whose blood has to carry great quantities of uric acid and similar poisons found in meat, would endanger the very life of the animal; that they produce only very little saliva, as their salivary glands are similarly reduced, since their food does not need much preparation with saliva.

Our teeth are wonderfully adapted for grinding grains and nuts.

The natural food of Man is that food which he can eat in its natural state without any interference whatever—eat with pleasure, and to the satisfaction not only of his palate and stomach, but to the satisfaction of his whole body. And if we go through the whole world, we will find nothing answering to these desiderata but the soft, luscious thirst-and-hunger-quenching fruits and the solid, heat-and-strength-giving and body-building nuts and grains.

Man, like all the other living creatures, is the product of circumstances and environment. He could develop as a fruit, grain and nut eater, only on fruit, grain and nut food, and on nothing else; therefore, he must have originated in a region of the Earth, where this particular food was produced in abundance. Man's cradle, as science tells us, stood in the region

of the palms. Here we find to the present day the most wonderful assortment of eatable fruits and nuts, and the most happy and perfect specimens of humanity. But even in the temperate zones—in fact, in every clime suitable and advantageous to man—we find trees producing suitable fruits, and plants producing edible seeds. Forests of nut trees must have covered, for thousands of years, great parts of the surface of the earth, for their timber and their fruit have been found in the lowest strata of the inhabited earth.

Man, then, was well provided for, and must have existed for many years on this, his natural food, to develop into the most perfect specimen of a fruit-eater on Earth. How long this easy and natural life lasted we can but imperfectly guess.

The great change of the whole life of Man and of all conditions and aspirations of his nature came with the discovery of fire. Fire is undoubtedly the greatest factor in human progress; without it the advances and blessings of civilisation are absolutely impossible. If Man had been satisfied to use the fire for productive and scientific purposes only, he would have become master of the earth without degrading himself to the slave of his most brutal passions and desires.

Soon after Man had found the influence of fire in warming his body or his hut, he must have been captivated by the alluring flavours and the inviting appearance of some, perhaps accidentally, roasted animal, and he tried to eat it! The taste of cooked food, once acquired, has proved the curse and the bane of mankind ever since. With the help of fire, Man has been enabled to render edible, things altogether foreign to his digestive apparatus. Fire assisted him to try as food the most extraordinary

articles from the animal as well as from the plant world, with the result that his desires for artificial combinations grew apace, and ultimately he almost forgot his natural food—the food he could eat for pleasure and profit without fire, without the help of the cook and the kitchen—the fruits, grains, and nuts.

Man found that on the artificially-prepared food he grew fat and heavy, and thought he was getting strong. His desires and passion were roused through the stimulating qualities of the unnatural food, and he took that for an expression of increased vitality and vigour. His thirst increased inordinately by the artificially-seasoned and salted diets: he invented fermented and distilled drinks, and mistook their baneful influence in driving the functions of the body into mad fury for a sign of increased strength and power to enjoy life. As the years went on, Man became more and more short-lived, more and more subject to disease and ailments.

o—o—o—o

**Important  
Scientific  
Facts.**

The plant-eaters form still at the present time, as they have always done, the great majority of animals on earth.

The highest developed plant-eaters are the fruit-eaters; the highest fruit-eater is Man.

Man evolved on a food consisting of fruits, especially palm fruits, grains, and nuts. His teeth and digestive organs are most perfectly adapted for this diet, even more so than those of his immediate fore-runners—the man-like apes. More than three-fourths of humanity at the present day live on plant products.

There are no meat-eaters in the direct line of Man's ancestry. Man's organism is not adapted to a diet of unprepared meat.

As long as Man ate the food on which the human race originally evolved, and to which his body is adapted, he was as healthy as all the normally-living animals; he did not know sickness, and his life extended to its normal term of 150 years and more.

Man did not take to meat in the natural way of evolution; his body is still that of a perfect fruit-eater in every respect. Man was forced to this unnatural food by terrestrial catastrophes, as the disappearance of his first habitat under the sea and the glacial period, which for a time deprived him of his natural food. The race of Man would have died out in those times, if he had not, at the proper moment, discovered the flesh foods and the use of fire to render unnatural food palatable and digestible for himself.

An animal organism—and Man is but the highest developed animal—may be compared to an engine in motion. As a working unit this engine claims first the driver's brain power as its energy-directing agent; it is built of metal and fed with coal or other fuel. The animal body directs its own operations through its own vitality; it is built of albumen with its organised food salts; it works on fuel food, such as sugar, starch and fat. During life a constant loss and waste is going on in our body, not only of the fuel food, but of the building material, and especially of vitality and energy. All this has to be replaced and renewed through the food.

A complete food, therefore, must contain vitality, or energetic tension, body-building substance and fuel material.

All animals eating their natural, living food receive abundance of these necessities, and are always healthy and well fed.

All life on Earth is transmuted sun-power. The plants are the storehouses and accumulators of sun-energy, and their products contain, in their natural state, the highest energetic tension; coal, the oldest plant-product, is the great power-producer on Earth.

Fruits and seeds, the noblest and highest products of plant life, form the most luscious and the most compact representation of condensed sunlight, the highest accumulation of vital energy. They are perfect foods for Man.

The fruit-eaters next below man in the animal scale are represented by the man-like apes, the orang, and gorilla—prodigies in strength, endurance, and longevity.

Cooking has rendered accessible to Man vast stores of food-material, which Man cannot digest in their raw state. But boiling heat destroys the albumen molecule—the building material for the body—which at the same time supplies the vital principle.

Cooked food is like a burnt granary containing a variable quantity of salvage concealed in useless debris. Cooked food is partly destroyed food, and can never regain its full feeding or life-giving value. A body fed on cooked food is a body starved with regard to real life-giving food, but over-filled with useless waste material.

Every animal body is able to regularly remove the waste produced by its own workings; it preserves internal cleanliness which is necessary to a harmonious discharge of all its functions, i.e., to perfect health.

When surplus waste is introduced and the body cannot discharge it or burn it all off at once, our system must give the intruder lodging-room, and must find a *modus vivendi* under adverse circumstances.

The bodily functions must, to a certain extent, be hampered by this deposited waste; the working of the organs become irregular, and often painful; a state of chronic disease is created.

At times the body—stimulated by changes in temperature, or an extra surfeit, etc.—makes a special effort to remove the foreign waste: this critical effort is called an acute disease.

There is but one great cause of disease: internal impurity. There is but one cure for disease: the removal of internal dirt.

The waste matter is either carried away in the shape of increased discharges from the different excretory organs, the mucous membranes, the skin, etc., or it is burnt off through increased bodily heat, accompanied by fever, thirst, and want of appetite.

The only rational assistance we can give Nature during these critical exertions at self-purification are a constant supply of fresh air (oxygen for the burning off), the free internal and external use of water and fruit juices as carrying and dissolving agents for the impurities, and total abstinence from solid food in order to give Nature a free hand.

All other attempts at curing disease are but an interference with Nature, especially the introduction of poisonous drugs, stimulants, alcohol, serums, lymphs, etc., and can do only harm by increasing and impeding the work of nature.

There is but one way of preventing disease: to live in the open air and on our normal food, unspoiled by artificial interference: on the sun-cooked fruits and seeds.

When the people, free from bloodshed in their daily meals, live on their natural food in its natural state; when they keep their digestive organs free from irritating, biting, and fermenting artificialities, and their blood free from poisonous waste matter derived from dead food, there will be no more need for the stimulating and soothing fiend alcohol, who only waits the opportunity of a little carelessness to destroy its unthinking victim; and there will be no more need for prescriptions of drugs and poisons.

o—o—o—o

### THE LATE DR. ABRAMOWSKI.

The passing from this world of our Colleague, Dr. O. L. M. Abramowski, who has rendered such great service to the Food-Reform Cause in Australia, caused spontaneous evidence concerning the value of his labours in the interests of mankind to be at once forthcoming. Letters of sympathy and appreciation were received by his widow from every part of the world.

As many people were perplexed by the news of his sudden death, and certain opponents of Fruitarianism have suggested that his dietetic views shortened his life (though the reverse is the truth) it is advisable to print the following extract from a letter written by Mrs. Abramowski:—

"I am very pleased indeed to give you information re the cause of the Doctor's death, so that you may be able to refute any hostile remarks, which would injure a just and good cause.

"His rejuvenation was complete, wonderful and lasting, allowing him an activity, both of body and mind, far beyond his years, and giving him a keen enjoyment of life, which alone was worth striving for. His body, and all organs, were, according to medical men who examined him and Assurance Company's statements, in most perfect order and state of health and strength to the very last, his death a most peaceful and painless one, like slumbering into another world.

"These were the results of diet and mode of life on himself, while there are thousands whose lives he has saved, prolonged and freed from pain by his advice and treatment—most wonderful cures and happy restorations indeed.

"Now for the cause of his death:

"Inadequate support of his ideas and his Sanitarium resulted in a severe financial failure, quite unexpected and unprovided for by the sanguine Doctor, whose every thought was but the benefit of humanity at large.

"He took this so much to heart that after having to give up the Sanitarium, he lost interest in life and neglected himself in spite of our entreaties to take care of himself.

"His diet and fasting cure being proven by hundreds of results of the most successful kind, he had commenced to experiment with his body in different directions, *introducing poisons and disease germs of all kinds*, which his body had resisted so long as his general state of health and vigour was not lowered by worry and trouble.

"But mind and body attacked together, proved too much for even such a resistant

commonwealth of cells. The combined poisons did their work, and he died within a week, keeping up cheer and hope to the last.

"Please make any use possible of this information, so that the Doctor's great and good work may continue to help sufferers and believers."

(The above is reprinted from the Editorial Notes appearing in "The Herald of the Gold Age" of October, 1911, the publication of which magazine unfortunately ceased in 1918.)

-----  
"He (Dr. Abramowski) was in charge of the local hospital when an epidemic of Typhoid occurred. Being an experimenter born, he admitted alternate patients to the two sides of a ward. Those on one side were fed on the usual typhoid diet—an ample one including milk, eggs and minced meat. Those on the other side were fed on 3lb. of soft fruit a day—peaches, grapes and apricots. He dealt with over a hundred patients altogether. Among those getting the orthodox diet there were the usual serious complications and several deaths. On the other side of the ward patients got well much quicker; serious complications, such as perforation, did not occur, and the one and only patient who died was one who was moribund on admission. He relates sadly that his experiment would have been even more conclusive but for the fact that one morning the Sister-in-charge presented him with an ultimatum, flatly refusing to give the old-fashioned diet to any more patients because, she said, it was clearly killing them!"

(Extract from a Lecture, entitled "Vegetarianism in Medical Practice," by Dr. C. V. Pink to the Croydon Vegetarian Society on 3rd November, 1945.)

We are glad to note that there are several institutions in Natal working on somewhat similar lines to those so strongly recommended by Dr. Abramowski.

For further information, apply to our Secretary, May, 1946.

## BOOKS WRITTEN BY MORRIS KROK

### FORMULA FOR LONG LIFE

The theme of this book is to show how to work in harmony with the dynamic self healing intelligence of the body. It includes amongst other things, sections on fasting, raw foods, breathing, natural living and healing. It also shows that symptoms are an attempt on the part of the body to rid itself of unwanted toxins and not something to be fought tooth and nail by drugs. Price: . . USA \$5,00 . . R4,00 . . . £2,75

### AMAZING NEW HEALTH SYSTEM - THE INNER CLEAN WAY

A unique method of daily cleansing the intestinal tract in conjunction with a diet consisting of mostly raw vegetarian food, and a programme of exercise that can give you a thrilling sense of well-being.

Digestion and kidney function will improve; joints will become more supple; body tissue will become firmer and leaner; bowels will work with clocklike regularity; sinuses, lungs and abdomen (hollow cavities of the body) will resonate with soundness; heart-beat will become slow and strong; body odour will eventually disappear; and the mouth will always have a clean sweet taste as it is bathed in a plentiful supply of saliva. What is more, addictions are also broken by this method.

The author using his system was able to run a standard marathon in 3 hours 7 minutes at the age of 49 after training only for two years, improving on his initial run by 1 hour.

Price: (Paperback) . . USA \$5,00 . . £2,75 . . R4,00

### DIET, HEALTH AND LIVING ON AIR

This entire book is linked in clear, short statements for the purpose of combining natural laws in relation to our diet and healing, the conservation of our forests, water and natural resources, and what the yogi have to tell us regarding the possibility of living on air.

The purpose of this book is not to teach you to live on air but to show that man is basically a breathing mechanism and what the destructive nature of eating wrong foods does to him.

Price: (Paperback) . . USA \$3,00 . . £1,50 . . R2,00

## DIARY OF A HEALTH AND TRUTH SEEKER

This book not only gives details of the author's own experiences regarding yoga and his initiation into the art of natural living and healing, but also includes his crusade against the false health systems taught today. His analysis of life and his sayings will be a constant companion to the health seeker, as it gives inspiration and encouragement in times of doubt. He concedes, that man reaches his greatest fulfilment when he discovers truth for himself.

Price: (Paperback) . . USA \$5,00 . . £2,75 . . R5,00

### GOLDEN PATH TO REJUVENATION

Based on the water system for inner purification, this work shows what quantities of by-products can be retained by the body over the years. When this system is used to minimize the harmful effects of impure foods or toxic substances, the body will be cleansed in the shortest possible time.

The author's own experiences are cited to show the importance of opening the inner channels of the body for restoring health.

Price: (Paperback) . . USA \$5,00 . . £2,75 . . R4,00

### HATHA YOGA - THE VIBRANT SCIENCE OF LIFE

The yogis through pain-staking research developed the most comprehensive and advanced health system. It has been tested and proven for thousands of years, and anyone who takes the trouble will be able to experience the benefits derived from the cleansing practices, the postures and breathing exercises. It is so all-embracing that there are exercises for the tongue, the anus, every joint and muscle in the body, the heart, lungs and abdomen. They even went to the extent of standing on the head for as long as an hour to reverse the effect of gravity on the system.

Yoga, done correctly keeps the body youthful and supple, slows down the heart beat, and quiets the breath.

Without equipment, and with the minimum of effort, one derives the greatest amount of benefit. Like the author who has been studying it for over 30 years, you too will find it more and more fascinating.

Price: (Paperback) . . USA \$6,00 . . £3,00 . . R5,00

**A book for all Positive People**

**KINDRED SOUL**

**by Morris Krok**

This work, in a dynamic and concise way, outlines the plan whereby man needs to implement to save mankind and the earth we are living upon. The basic truths are given of the dangers facing man which largely stems from his beliefs and his reliance on technology and pseudo-science to come to his aid.

The answer ultimately is to return to a semi-rural existence which will enable him to reafforest the land with life giving fruit trees, make the desert bloom and bring back water to parched lands. It is only in this environment that man will live as nature intended him to so that he will not pollute the elements or himself with chemical and drugs.

A must for all those who wish to become fully aware of the truth.
